

SAMPLE FALL PROTECTION PLAN

A fall protection plan can only be used for operations involving Leading Edge Work, Precast Concrete Construction Work or Residential Construction Work, where we can demonstrate that it is infeasible or creates a greater hazard to use conventional fall protection systems. Each fall protection plan must be site specific. This sample plan outlines the elements that must be addressed in a fall protection plan.

Fall Protection Plan

This Fall Protection Plan is specific for the following project:

Location of job _____

Erecting Company _____

Date Plan Prepared or Modified _____ Plan Prepared By: _____

It is the responsibility of _____ to carry out this fall protection plan. Supervisors are also responsible for inspecting and correcting any unsafe acts or conditions immediately. Each employee is responsible for understanding and following the procedures of this plan and for following the instructions of a supervisor. Employees must also report any unsafe or hazardous conditions or acts. Any changes to this Fall Protection Plan must be approved in writing by _____.

REASONS FOR FALL PROTECTION PLAN

The following is a written explanation of why the use of conventional fall protection systems are infeasible or create a greater hazard.

Guardrail systems are not being used because:

Personal Fall Arrest Systems are not being used because:

Safety Net Systems are not being used because:

OTHER FALL PROTECTION MEASURES CONSIDERED FOR THIS PROJECT

The following is a list of other fall protection measures considered and an explanation of the limitations for their use on this project. If during this project any employee sees an area that could be erected more safely by these conventional fall protection measures, the supervisor should be notified.

Scaffolds are not being used because:

Ladders are not being used because:

Vehicle mounted platforms are not being used because:

Crane suspended personnel platforms are not being used because:
